

SKIN BY SARAH

Dermapen Treatment

What is Dermapen used for?

Dermapen is an advanced skin microneedling treatment. The needles penetrate the skin to stimulate a control wound to bring about healing and natural collagen production whilst rejuvenating the skin.

What areas can be treated with Dermapen?

Dermapen can be used on both the face and the body. Dermapen is used for multiple conditions of the skin including Ageing, Scarring, Pigmentation, Acne Scarring and Rosacea.

Is Dermapen treatment painful?

Dermapen can cause mild discomfort, the deeper the needle depth the more discomfort is felt. This and other concerns can be discussed with your practitioner at the consultation.

When will I see the result of my Dermapen?

Results of dermapen can usually be seen within a skin cycle from the treatment (within 3 months), this is dependent on the condition of the skin being treated and the age of the client. 3-4 sessions are normally required for results to be seen although 6-8 sessions are usually recommended for maximum results.

What are the possible side effects of Dermapen?

Dermapen is a relatively low risk treatment with minimal side effects and complications. However in the first 24 hours of treatment the skin will possibly be red with spot bleeding with mild erythema and feel dry and tight. Within 5 days post treatment the skin should be back to normal and homecare routines can be reintroduced.

What is the aftercare for Dermapen?

The aftercare following dermapen is to follow your practitioners advice regarding products. Do not expose the area to the sun and avoid intensive exercise, makeup, swimming, saunas, steam rooms and hot showers. It is also advisable to avoid any further clinical treatments and active topical skin care until advised to do so.
